

BCMI Partners With Binni on New Integration to Streamline Concrete Operations

REDMOND, WASHINGTON, January 17, 2025 — BCMI, a leader in cloud-based software solutions for ready-mix concrete and bulk materials, and binni, an innovative platform designed to simplify concrete construction operations through its value-chain network, today announced an integration partnership. This collaboration will connect binni Concrete with BCMI's Material Now platform, enhancing how concrete batch and delivery ticket information is shared from ready-mix suppliers to contractors and then consolidated with key data from all project stakeholders.

As technology adoption in construction accelerates, the need for seamless data interoperability becomes even more critical. This integration aims to increase efficiency, streamline workflows, and provide real-time access to important concrete data, empowering contractors to make more informed decisions and boost productivity.

"Binni was founded on the principles of data transparency and interoperability," binni COO Wes Morrison says. "We believe that data unification is key to advancing the construction industry, and this partnership with BCMI is a major step toward realizing that vision. We're excited about the impact this will have on the future of concrete operations."

Through the new integration, when a ready-mix producer using BCMI's system sends a load of concrete, batch and delivery details can automatically be transmitted to binni. The ticket information is then linked to the appropriate pour and correlated with other project information within binni, such as the BIM model, maturity sensor readings, field and lab QC results, and more.

"BCMI is committed to the needs of material producers, full stop," BCMI CEO Craig Yeack says. "Binni represents very high-value information to material producers, and BCMI is honored to be able to work with binni to present this actionable information to the end user."

This integration sets the stage for a new standard in data management for the concrete construction industry, driving greater efficiency and collaboration across the value chain. For more information on how this partnership can enhance your concrete operations, please contact BCMI or binni directly.

About BCMI

BCMI Corp.'s cloud-based, mobile software empowers producers of concrete, aggregates, asphalt and cement to improve business processes and strengthen customer relationships. BCMI's cloud-native dispatch, performance analytics, interactive communication tools and AI-assisted solutions keep materials producers and contractors aligned with real-time business solutions. For more on BCMI Dispatch, Material Pro and Material Now apps, visit www.bcmicorp.com.

About binni

Binni, a construction technology company, provides a networking and productivity solution that orchestrates concrete construction data to streamline end-to-end operations. Binni unifies and simplifies the flow of information deep into the project and business processes of the contractors and the concrete's value chain. Through front-end applications and back-end processes, binni facilitates the

connection between construction teams and their materials and service suppliers and how information for their concrete operations is aggregated, correlated, and disseminated.
